

What's New

BizInt Smart Charts for Patents 3.4 was released in September 2010. This document describes features added to BizInt Smart Charts over the past 12-18 months.

Create patents reports combining information from...

...these sources. databases and export formats

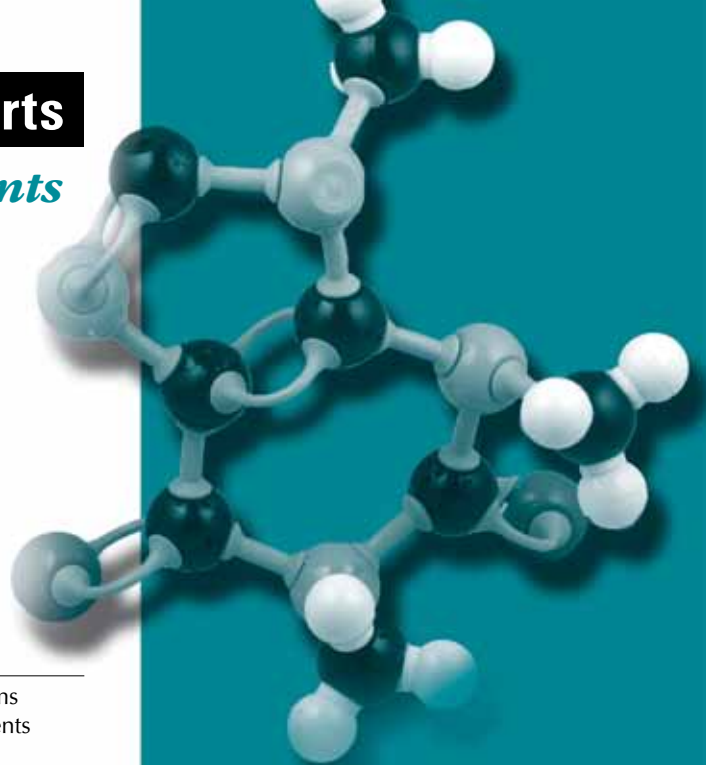

STN	<i>Patents:</i> Derwent World Patents Index & WPI FirstView, Claims US Patents, Chemical Abstracts, MARPAT, REGISTRY, US Patents Fulltext, USPAT2, PCTFull, EPFull. <i>Literature:</i> JAPIO, EMBASE, MEDLINE, BIOSIS, COMPENDEX, PROMT, SciSearch, PASCAL, KOSMET, INSPEC, METADEX, TULSA, RAPRA, CANCERLIT, IPA, KOREAPAT, FEDRIP, FSTA, FROSTI, AGRICOLA, Derwent Drug File. <i>Gene:</i> USGENE, DGENE, PCTGENE.
Questel	FAMPAT, PLUSPAT, Derwent World Patents Index, API/Derwent Merged File, US and EP (apps and pats), and PCTFULL. (Use the Full XML export from QPAT, Orbit.com, Qweb, and PatentExaminer)
Minesoft	PatBase, PatentArchive, using BizInt Smart Charts Data File export.
LexisNexis	TotalPatent - export search results from an online Work Folder using the BizInt Smart Charts (BPD) export format.
Thomson Reuters	<ul style="list-style-type: none">• MicroPatent: Export your FullText PatSearch or MP-INPADOC worksheet using the BPD export format from "Export Data" page.• Thomson Innovation: Use the "BizInt Smart Charts" export.• Delphion: Use XML from Delphion Data Extract.• Thomson Pharma: Use the BizInt export for Thomson Pharma patents (IP) and Thomson Pharma Partnering (IDdb)• Integrity: Use the BizInt export for Prous Integrity Patents
GenomeQuest	GQPAT and Geneseq, using the "XML for BizInt Smart Charts" export option.
SciFinder	CAplus and MEDLINE; export "Tagged Text".
Elsevier	EnCompassPAT from the Ei EnCompass website
Dialog	See "Supported Databases" on our website for more details.

Identify Common Patent Family

- **Tools | Identify Common Patent Family** looks at all members of patent families across different records and databases and creates a "**Common Family**" column with a single key patent number. Sorting by this column will help you identify related patents— **use the check box on the Sort panel** to have row shading change each time the primary sort value changes.

Version 3.4 – Improved Support for Windows Installations

- New installation package makes it easier to install new releases.
See: <http://www.bizcharts.com/version3.4>
- Application settings and saved templates are now stored in a user-writable directory, not in the installation directory.

Patents database and host enhancements

- **Thomson Innovation:** Support for Thomson Innovation was added in 3.4.6 (04 May 2011), including support for Derwent WPI data when present. Export your search results using the new “BizInt Smart Charts” export (.zip files must be manually imported.) Version 3.4.9 (16 Aug 2011) added support for publication dates for all family members. Images are not currently exported from Innovation.
- **Questel:** Added support for the Notes field on Orbit.com in 3.4.5 (03 Apr 2011).
- **Minesoft:** As of 3.4.7 (1 June 2011) applications are presented in the same order as the publications in the family; first filing/ first filing date are extracted as columns.
- **Delphion:** Fixed an error in full-text links to Delphion for 2010 and later US and PCT apps in 3.4.5 (03 Apr 2011).

Enhanced support for gene sequence databases

- **STN:** Added support for DGENE, PCTGEN in 3.4.15 (5 Feb 2012). BLAST, GETSIM supported, including from USGENE.
- **GenomeQuest:** Nucleotide and Protein data from GQPat and Geneseq collections are supported.
- BizInt Smart Charts attempts to create a sequence ID from all databases to populate the Sequence ID column.
- **Improved Sequence Alignment display in HTML reports:** A new Text|Fixed Width option in 3.4.10 (3 Oct 2011) changes the selected cells to Courier font and ensures that spaces appear properly in HTML exports.
- A new Combine preset option “Combine without removing duplicates” was added in 3.4.11 (30 Oct 2011.) This is useful for combining gene sequence results from multiple queries, which may include the same sequence from more than one query hit.

Editing and viewing charts

- **View | Rows panel** is now larger and shows the row list starting with the current row. When you make changes, the chart will maintain your row position rather than jumping to the top of the chart.
- **Moving Rows:** A new Edit | Move Rows command allows you to move a row (or rows) within the chart, to the top, bottom, or to a specific position in the chart.
- **New toolbar icons** for Sort, Hide Row, and Hide Column. A new Hide | Column command allows you to hide the current column from the right mouse menu or toolbar. The Sort panel now opens with the current column selected.

Subscribe to Release Announcements

- You can subscribe to announcements of new releases, via links on each download page.
- **RSS Feeds:** You can also subscribe to RSS 2.0 feeds for each product, via our home page, the customer download pages, and on each Latest Release page.

New Acrobat and Excel export options

- Added a new export option “HTML - for Acrobat” in 3.4.13 (2 Jan 2012) which launches the standard HTML export directly to Adobe Acrobat.
- Added a new “HTML - optimized for Excel” export in 3.4.14 (17 Jan 2012) which preserves most formatting while only using one row in Excel for each row in BizInt Smart Charts.

Links in HTML export

- **Create links from patent numbers** in the Patent Family or Basic Patent Number columns to full patent documents. The links will appear in exported HTML reports.
 1. Use View | Column Properties to select for a column, AND
 2. Choose which host you want to use for each authority under Options | Full Text Patent Links.
- **Supported authorities:** US, EP, WO, GB, FR.
- **Supported hosts/databases:** Delphion, MicroPatent, Minesoft (PatentOrder, Patbase Express family view, PatentOrder Direct PDF access), esp@cenet, USPTO, Thomson Innovation, and PatentScope.
- Support for the new v5 espacenet link format was added in 3.4.7 (1 June 2011). If a kind code isn't present with the number, the link will perform a number search.
- Support for links to Thomson Innovation (all authorities) and Patentscope (PCT only) was added in 3.4.11 (30 Oct 2011).

BizInt Smart Charts Reference Rows™ 1.0

Reference Rows 1.0 was released in December 2011.

This utility is included in all BizInt Smart Charts licenses and offers the ability to create “Reference Rows”— a single row combining information from different sources.

- For more information and to download the software, go to: <http://www.bizcharts.com/ReferenceRows>

XML Smart Data Exchange (beta)

- The XML Smart Data Exchange format is intended for exchanging data between BizInt Smart Charts and other analysis tools in a standard XML format.
- The beta XML export allows you to export chart data to Vantage Point and reimport analysis results as new columns.

Questions or suggestions?
