

What's New

BizInt Smart Charts for Drug Pipelines 3.4 was released in September 2010. This document describes features added to BizInt Smart Charts for Drug Pipelines over the past 12-18 months.

Create drug pipeline reports combining information from...

these pipeline databases...

on these platforms.

Pharmaprojects	Dialog, CD, Web
Citeline Pipeline	Web, using BizInt export
IMS R&D Focus	Dialog, CD, Web, Ovid
Adis R&D Insight	Dialog, Web, Ovid
Thomson Pharma Partnering Thomson Pharma	Web (pipeline & patents, using the 3.0 export format)
Integrity (Thomson Reuters)	Web (Drugs & Biologics) enhanced export

And create trial reports from these clinical trial databases...

Adis Clinical Trial Insight	Web (Adis Insight)
Citeline TrialTrove	Web (TrialTrove)
ClinicalTrials.gov	Web (NIH)

Generate Common Drug Name - multi-database drug pipeline reports

- **Tools | Generate Common Drug Names** looks at product names and synonyms across different records and databases and creates a new **"Common Drug Name" column** with a single drug name. Sorting by this column will help you identify related compounds.
- **Row shading based on sort values:** You can specify on the File|Page Setup panel (and using a check box on the Sort panel) to have row shading change each time the primary sort value changes.

Version 3.4 – Improved Support for Windows Installations

- New installation package makes it easier to install new releases for some XP, Vista and Windows 7 users without Administrator privileges, due to code-signing and compliance with XP, Vista, and Windows 7 practices. **See:** <http://www.bizcharts.com/version3.4>
- Application settings and saved templates are now stored in a user-writable directory, not in the installation directory.
- Options for BizInt Smart Charts to take over the file associations used by BizInt Web Charts Citeline Edition and BizInt Web Charts for AdisInsight.
- Silent installations supported in Version 3.4.3 (27 Feb 2011)

Clinical trial reports

- You can create **combined clinical trials reports** by selecting a Clinical Trials Insight, TrialTrove, or ClinicalTrials.gov chart as your key chart and combining it with other clinical trial reports.
- **Tools | Generate Common Trial ID** command introduced in Version 3.4.2 (11 Nov 2010). If an NCT ID is present it will be chosen as the Common Trial ID. Using BizInt Smart Charts Reference Rows, you can create a report with a single row for each trial.
- Support for the new generation Adis Clinical Trials Insight added in Version 3.4.3 (27 Feb 2011)
- Improved column mappings (companies, summary text) in Version 3.4.7 (18 Sept 2011).
- Clinical trials case study presentation delivered at Pharma-Bio-Med in Nov 2011:
<http://www.bizcharts.com/events/presentations.php>

Pipeline Databases

- **DataStar:** As of 31 December 2011, the new ProQuest Dialog™ service has replaced the DataStar® service. ProQuest is working with BizInt to develop an export format so that drug pipeline and other databases on the ProQuest Dialog system can be imported into BizInt Smart Charts.
- **Ovid:** support for Ovid Jumpstarts and processing of R&D Focus Originator field in Version 3.4.1 (8 Oct 2010). Database definitions for Adis R&D Insight were updated in 3.4.6 (24 July 2011).
- Additional fields supported from R&D Insight, Integrity, Pharmaprojects, and TrialTrove (3.4.3, 27 Feb 2011).

New Acrobat and Excel export options

- Added a new export option “HTML - for Acrobat” in 3.4.13 (2 Jan 2012) which launches the standard HTML export directly to Adobe Acrobat.
- Added a new “HTML - optimized for Excel” export in 3.4.14 (17 Jan 2012) which preserves most formatting while only using one row in Excel for each row in BizInt Smart Charts.

Links in HTML exports

- **HTML Links to full text patents:** You can also generate HTML links to selected full-text patent sources from fields such as Related Patents in Prous Integrity. Use View | Column Properties to select this capability for a column, AND choose which host you want to use for each authority under Options | Full Text Patent Links.
- **Links to full publisher records:** Links to Thomson Pharma, R&D Insight, Integrity, and Citeline records are generated in the exported HTML.
- **Ovid:** The OvidSP platform now offers the option to include Ovid Jumpstarts in your export. These are supported as of Version 3.4.1 (8 Oct 2010).

Subscribe to Release Announcements

- You can now subscribe to announcements of new releases, via links on each download page.
- **RSS Feeds:** RSS 2.0 feeds are available for each product via our home page, the customer download pages, and on each Latest Release page.

Editing and viewing charts

- **View | Rows panel** is now larger and shows the row list starting with the current row. When you make changes on the View | Rows, View | Columns and View | Apply Template panels, the chart will maintain your row position rather than jumping to the top of the chart.
- **Moving Rows:** A new Edit | Move Rows command allows you to move a row (or rows) within the chart, to the top, bottom, or to a specific position in the chart.
- **Hiding Columns:** A new Hide | Column command allows you to hide the current column from the right mouse menu or toolbar.
- **Sorting:** the Sort panel now starts with the current column selected. “Sort” now appears on the right mouse menu.
- **New toolbar icons** for Sort, Hide Row, and Hide Column.
- **Truncation:** You can now set text truncation preferences under Options | Truncate text in cells. Settings apply when you create new charts, not to existing charts.

BizInt Smart Charts Reference Rows™ 1.0

Reference Rows 1.0 was released in December 2011. This utility is included in all BizInt Smart Charts licenses and offers the ability to create “Reference Rows”— a single row combining information from different sources.

- For more information and to download the software, go to:
<http://www.bizcharts.com/ReferenceRows>

XML Smart Data Exchange (beta)

- The XML Smart Data Exchange format is intended for exchanging data between BizInt Smart Charts and other analysis tools in a standard XML format.
- The beta XML export allows you to export chart data to Vantage Point and reimport analysis results as new columns.
